Virtualization is today's reality.
Unleash the power of your enterprise..

VIRTUALIZATION | LESS & POWERFUL

How many **servers** do you have only working "part-time"?

How are you managing and **securing data** on the desktops and laptops deployed in your organization?

How much effort is spent managing and maintaining **hardware**? How much of avoidable expenses can you recover?

Tech9labs can answer these questions with compelling **benefits** and savings.

Unleash the power of your enterprise today, starting with a Plan & Design Roadmap.

Servers: More compute per watt

Save capital, floor space, and energy by consolidating multiple workloads onto fewer physical servers. The traditional server-per-workload paradigm ties up valuable capital, drains operational resources and is typically underutilized. Server virtualization technologies can help you:

- Immediate productivity boost
- Reduce power and cooling costs up to 50%
- Streamline daily maintenance and management
- Improve business continuity, resiliency and availability of core applications to support higher service levels (SLAs)

ROI: 6 to 9 Months

Desktops: Empowering User with capacity anytime, anywhere

Desktop PCs are notoriously underutilized, tying up capital, energy resources and management resources. Conventional desktops PCs also limit flexibility and productivity, tethering end users to individual machines and isolating active files on local drives.

Each desktop typically costs $500 yearly to operate. Virtualization can recover over $300 of that expense per PC.
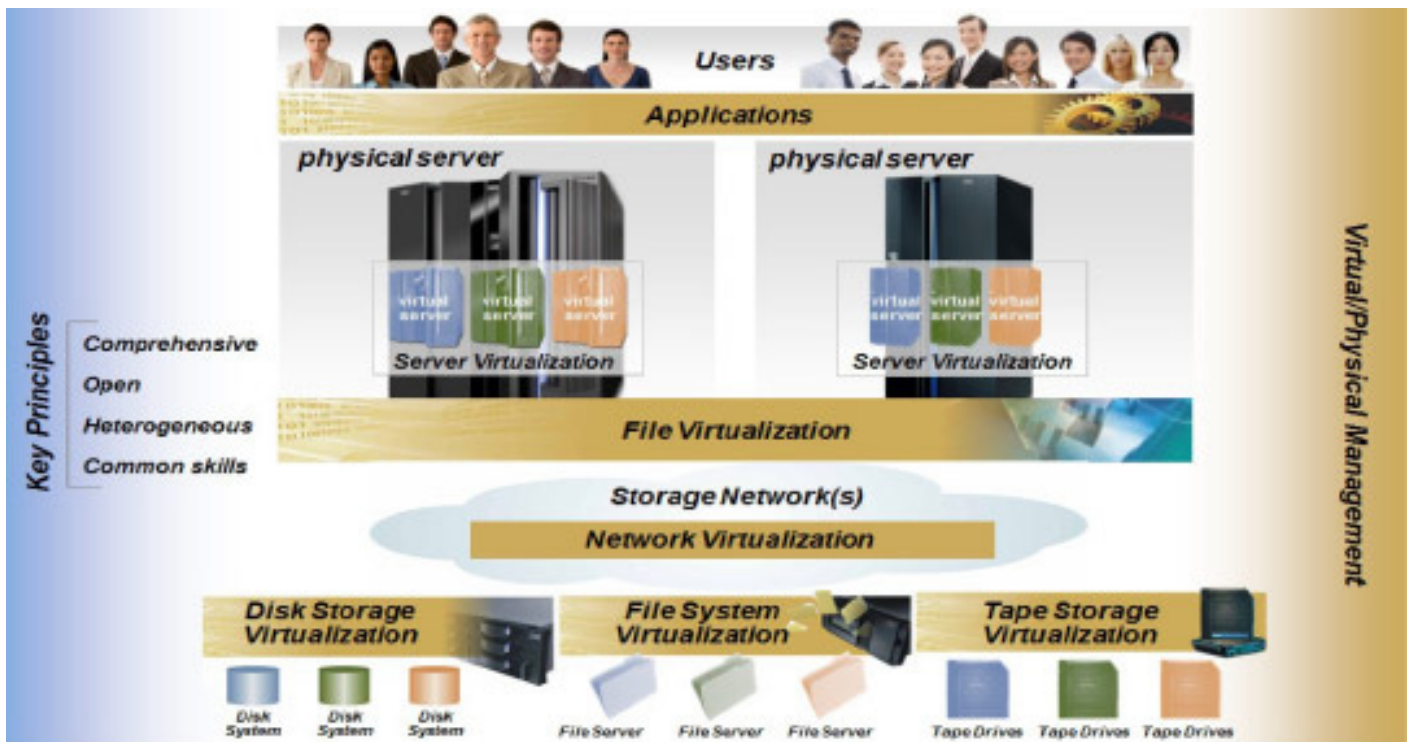

- Conserve energy with thin-client efficiency
- Improve productivity with the ability to seamlessly scale up to world-class compute power.

- Reduce downtime due to user misconfiguration or component failure.
- Cut management and provisioning costs associated with traditional desktop computing.
- Support end user mobility with on demand access to familiar environments and files from any connected client.

Fight Storage sprawl with Storage Virtualization

Modern businesses live and die by the ability to effectively capture, store and utilize data. With the accelerating pace of data growth, simply adding disks is no longer enough.

Storage Virtualization unlocks "logical" volumes from physical locations, making information more readily available to business applications across the infrastructure.

Storage Virtualization can help you:

- Support business agility by making storage provisioning fast, easy, and flexible
- Extend the value of investments by transparently pooling diverse storage assets
- Improve productivity with reliable data access across the organization
- Optimize physical media access for energy efficiency
- Enable easy scalability to keep pace with data demands
- Simplify storage infrastructure management, even to a single point of control

ABOUT
INTEGRATED TECH9 LABS PVT. LTD.

Tech9Labs defines, designs and delivers technology-enabled business solutions that would help provide efficient & cost effective solutions to complex information management requirements through innovative application of the latest in technology.

From conception to completion, Tech9labs unifies your IT infrastructure, protects it and maximizes your business' performance. With over support of 60 professionals PAN India, we are committed to your goals while holding ourselves to the highest standards.
