

How Tech9labs Helped REL See 30% Improvement in Business Processes with IBM Power Servers

The Client

A leading holding entity, Religare Enterprises Limited (REL) offers turnkey and tailor-made portfolio of financial services to almost every segment of the market.

Need

A solution that would meet the performance, flexibility and scalability demands of REL's ever-growing data volumes.

KEY CHALLENGE: The ever-increasing data volumes began to push REL's existing storage and server infrastructure - Power6 servers with IBM Disk Storage - to its limits.

Tech9labs

Tech9Labs is a customer-driven organization that offers an innovative portfolio of IT Infrastructure Solutions and Services. By combining deep industry experience with a broad perspective, Tech9labs has helped numerous clients achieve measurable business benefits.

In this case, Tech9labs adopted a 4-pronged approach to help REL overcome their challenges and obtain better business outcomes within the designated timeline.

Understanding Business Requirements

1

This was the first step of Tech9labs' engagement with REL. Tech9labs, in collaboration with the team at REL, understood the business environment, requirements and the entire set of activities that needed to be executed.

Evaluating Challenges and Pain Areas

2

The second step was to understand the unique roadblocks that REL came across in coping with the growing data volumes. Tech9labs took a stock of the client's business objectives and the pain areas that threatened to disrupt REL's business productivity.

Proposing Solutions

3

Armed with its robust expertise, Tech9labs proposed IBM Servers with Power7+ processor along with IBM FlashSystem 840.

Implementing the Deployed Solution

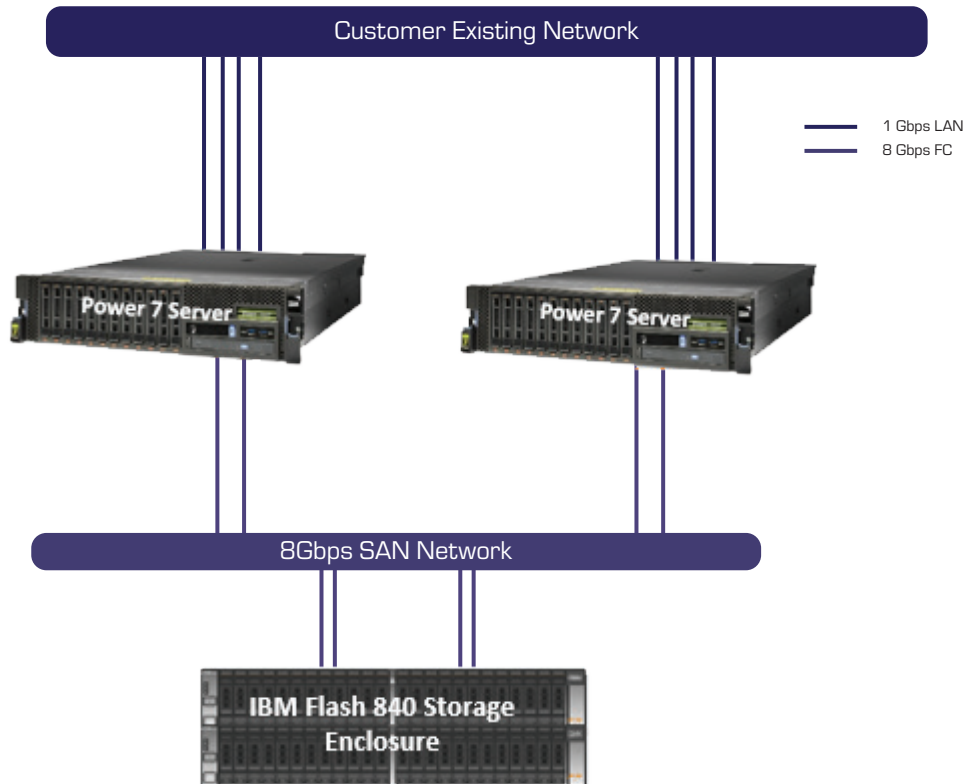

4

Given its successful experiences in deploying IBM Power servers, Tech9labs deployed the chosen solution with ease.

The Solution

REL sought a partner with robust capabilities that could help it mitigate the challenges. To achieve this objective, Tech9labs proposed IBM Servers with Power7+ processor along with IBM FlashSystem 840. Here's an overview of the chosen solution:

- IBM Power7 Servers deliver the utmost in infrastructure efficiency at enterprise scale, with flexible delivery models that can increase utilization.
- IBM Power 7 servers also provides the highest levels of security, ensuring the integrity of critical information while mitigating risk.
- IBM FlashSystem 840 enable business to unleash the power of performance, scale, and insight to accelerate the pace of businesses.

Results

1

30% efficiency performance improvement in business processes.

2

Better RoI and Reduced Total Cost of Ownership (TCO).

3

Increase in customer satisfaction levels.

4

Elimination of manual intervention for financial reporting.
